TO: PROPERTY OWNERS IN THE POWERSITE NORTH STUDY AREA

The Taney County Regional Sewer District (District) has secured the services of Great River Engineering (GRE) to design sewer improvements for the Powersite North Sanitary Sewer Improvements Project. This project is intended to provide public sewer service to the unsewered areas within and neighboring the Valley View Village and Powersite Subdivisions located approximately one mile southeast of Forsyth, Missouri. The Powersite North watershed covers approximately 900 acres and is surrounded by Bull Shoals Lake, State Highway 76, and Silver Creek Road. Providing sewer in this area will improve water quality by eliminating failing septic systems and small wastewater treatment systems.

GRE is currently in the preliminary design phase of the project. Once the preliminary design phase is complete, a public meeting will be held to take public input before initiating the final design. The public meeting will be posted once the date, time, and location are set. We hope to hear from you at this meeting. In the meantime, you may see our surveyors and engineers in your neighborhood. These individuals are collecting data necessary for the various design activities. It will be easy to recognize our survey team as they will be driving vehicles with our company name and logo on them. In addition, our team of engineers and surveyors will always have their business cards available.

If you are in receipt of this letter, your property is within the project study area. It is our desire to ensure that the property owners involved are always kept up to date and provided with accurate information throughout the course of the project. In hopes to accomplish this goal, we have launched an interactive website that pertains solely to the Powersite North Sanitary Sewer Improvements Project. It is our intention that this website provides up to date information regarding the status of the project and serves as a tool for communication between the public, the District, and Great River Engineering.

The website contains an interactive map showing the location of the project and the current layout of the proposed sewer system. This map is intended to serve as a tool to aid the public in visualizing how the sewer system will affect their property(s). There is also a place on the website that allows you to review frequently asked questions and a form for you to ask questions or to give comments that you may have. We will continually monitor the website and respond to your questions in a timely manner. The project website address is <http://pn.greatriv.com>. We encourage you to utilize this website as a resource throughout the course of the project.

We are excited to be a part of this project to provide public sewer to and improve water quality in the Powersite North study area. If you have questions or comments prior to the public meeting, please feel free to contact me at 417-886-7171 or visit the website mentioned above. You may also contact John Soutee, the Taney County Regional Sewer District Administrator, at 417-546-7220.

Very Truly Yours,
Great River Engineering
